All-Round Integrated Assistance Empowers the Development of Mountainous Area Education

Southcn.com 08:12, June 11, 2025

Gu Jinbo from Pangxi Primary School in Panyu District, Guangzhou, enjoys chatting with students during breaks to get close to their inner world.

Chen Zeming's teaching support is like a beam of light, illuminating the path of science and innovation for children in mountainous areas.

Students reading carefully. These books were donated by Shenzhen Library.

From May 23 to 25, the 2025 Guangdong-Hong Kong-Macao Student Information Technology and Innovation Competition & Artificial Intelligence Literacy Exhibition, hosted by the Department of Education of Guangdong Province, was held in Zhuhai. More than 4,000 young tech talents from over 1,000 schools across the three regions competed intensely.

After fierce competition, Zhong Mingrun, a student from Jiaoling People's Primary School in Meizhou City, stood out and won the first prize with an outstanding **13th place** province-wide. This marks the first time Jiaoling has won an award in such a competition. Behind this achievement lies the guidance and hard work of teaching-support teachers from Panyu District, Guangzhou.

Since the launch of paired assistance, the teaching-support team from the Education Bureau of Panyu District has adhered to the concept of **"all-round integrated assistance"**, rooted in the frontline of education in Jiaoling. It has carried out work in teaching practice, teacher training, school-school cooperation, and the introduction of educational resources, effectively promoting the further development of education in Jiaoling County.

Statistics show that up to now, the team has delivered **35 demonstration lessons**, organized **20 teaching seminars**, held **15 specialized teacher training sessions**, and facilitated **11 pairs of schools** between Panyu and Jiaoling to establish paired assistance, building a long-term platform for educational exchange and cooperation between the two regions.

Meticulous Nurturing

From "Tech Novices" to "Innovation Experts"

At the 2025 Guangdong-Hong Kong-Macao Student Information Technology and Innovation Competition, Zhong Mingrun entered the arena alone, completed the project independently,

and responded confidently to judges. With dedicated exploration and innovative thinking, she overcame challenges one after another and finally won the first prize.

After the award, Zhong Mingrun walked out and hugged her mother, who had waited for a long time. She immediately messaged her instructor Chen Zeming to share the good news and express gratitude for his careful guidance.

“Without Teacher Chen leading me along this path, I could never have achieved this! I want to thank him deeply,” said Zhong Mingrun. Chen Zeming has been a beacon on her journey of innovation.

Chen Zeming, the instructor, is a teacher from Shiqi Central Primary School in Panyu District, dispatched to support education in Jiaoling. As a part-time research fellow of information technology in Panyu District, he brought advanced IT education concepts to Jiaoling.

The road to science and innovation education in mountainous areas is not smooth. “When I first arrived, I found students had relatively weak foundations, limited competition experience, and insufficient hardware and software. But difficulties are like bugs in code—with patience, we can always find solutions,” Chen said with a smile.

He used after-school and weekend time to set up a **science and innovation interest group**, starting with basic programming logic and sensor principles, teaching students to assemble hardware and debug programs step by step. When equipment was insufficient, he borrowed experience from Panyu and “floated” devices from Panyu for students to practice.

In Chen Zeming’s class, boring code became commands to control machines, and complex circuit diagrams turned into light strips illuminating dreams. Under his guidance, children from Jiaoling People’s Primary School began to shine on innovation platforms.

Students Huang Junnan and Liu Yuqi developed a strong interest in AI. Inspired by rainstorm disasters, they proposed an intelligent rescue device. From conception, design to production, Chen Zeming accompanied them, refining every detail. Their work won the **second prize** in the Meizhou Youth Science and Technology Innovation Competition, giving children their first taste of joy and achievement from innovation.

Greater success followed. Preparing for the provincial competition, Chen Zeming focused on the challenging “Maker & Intelligent Manufacturing” category. He spotted Zhong Mingrun’s talent and perseverance and designed a **tailored training plan** for her.

To overcome technical difficulties, teacher and student often stayed in the computer room all day. Tiny solder joints on circuit boards and rolling lines of code witnessed countless attempts, optimizations, and breakthroughs.

Hard work paid off. Among strong provincial competitors, Zhong Mingrun performed calmly. After one and a half days of project defense, mechanical design, and technical testing, she won **first prize (13th province-wide)**—a historic breakthrough for both Jiaoling People's Primary School and Meizhou City this year. The whole school celebrated.

"Teacher Chen not only taught us knowledge but also how to think like scientists, face failure, and regain confidence," Zhong said.

This was exactly Chen Zeming's original intention: *"Give a man a fish and you feed him for a day; teach a man to fish and you feed him for a lifetime."* He did not just coach students to win competitions, but planted a seed of **innovation** in their hearts, giving them courage and ability to pursue dreams in science and technology.

Today, Chen Zeming's support continues. Like a beam of light, he illuminates children's innovative paths and writes a vivid chapter for education assistance in northern and western Guangdong. He proves that when high-quality urban educational resources meet the eager expectations of mountainous areas, infinite energy is ignited, lighting a fire of wisdom for every child with a tech dream.

Moistening Silently

Opening Hearts and Reigniting Learning Interest

When Gu Jinbo from Pangxi Primary School in Panyu first arrived at Guangfu School in Jiaoling, she looked at the students—their eyes clear and simple, like unpolluted springs in the valleys, full of silent longing.

"Their eyes are pure and full of desire for knowledge. I really enjoy being with them," she said.

Gu Jinbo paid special attention to quiet, neglected, or underachieving students. She found that many poor academic performances stemmed from **inadequate parental care**. One student, for example, was cared for by his 70-year-old grandmother; his father worked night shifts, his mother worked in the county town, and the child was often scolded and beaten, leaving him withdrawn and frustrated.

"The child's feelings were hidden in his composition," Gu recalled. In an essay titled *A Letter*, the student expressed fear of parental punishment and weariness with life. His words deeply touched Gu Jinbo.

She began to use **one-to-one homework feedback** and after-school talks to reach him. She first affirmed his strengths, especially his interest in Chinese, then gently guided his learning methods.

On an ordinary dusk, Gu praised a shining sentence in his composition: “This sentence is so vivid! It’s a unique and true feeling.” Her warmth melted the ice around the boy’s heart.

Little by little, he began to open up, talking about his lonely family life. Gu Jinbo listened without judgment.

Knowing she alone could not change his family environment, she called his parents patiently, sharing his small progress: “He took the initiative to clean the blackboard yesterday; his handwriting is neater. Children have light inside—they need encouragement, not suppression.”

She advised the parents to praise improvements, adjust work schedules, and keep daily short calls. Her persistence moved the family.

Gradually, the boy raised his head in class, volunteered to answer questions, did duty voluntarily, and his Chinese scores improved significantly. Most touchingly, **smiles returned to his face**.

Gu Jinbo’s work reflects the true essence of education: **not only transmitting knowledge but touching souls and awakening hearts**. It requires sensitivity to children’s unspoken pain, patience to build trust, and effort to improve family environments.

Tailored Plans & Bay Area Resources Supporting Mountainous Areas

Over the past year, the Panyu teaching-support team has stuck to **all-round integrated assistance**, deeply involved in teaching, teacher development, school pairing, and resource introduction.

Jiaoling Education Bureau provided accommodation, transportation, and living support to help teachers adapt quickly. Local schools gave full play to the demonstration role of support teachers through a **mentoring system** to improve local teachers’ professional skills.

The two education bureaus maintained close communication, regularly inviting top teachers and studio leaders from Guangzhou to give lectures, demonstrations, and seminars focused on core literacy in the compulsory education curriculum.

“Within the first week, I visited all 10 assisted schools—kindergarten, primary, junior high, and senior high—to understand actual needs and provide a basis for targeted assistance,” said Chen Mingda, leader of the Panyu teaching-support team.

“We communicated with school leaders and teachers, designed **personalized assistance plans**, and ensured support was targeted and benefited students at all levels.”

Since the assistance began:

- 35 demonstration lessons

- 20 teaching seminars
- 15 professional training sessions

These activities covered more than **60% of teachers in Jiaoling**, significantly improving professional capacity.

Chen Mingda also facilitated **11 school pairs** between Panyu and Jiaoling, establishing a long-term cooperation platform. Six pairs have already carried out mutual visits, joint teaching research, curriculum sharing, and student exchanges.

Notably, with the team's coordination, **Shenzhen Library donated 5,139 books** to five schools in Jiaoling and Wuhua, covering literature, popular science, and education, greatly enriching school libraries.

Grateful letters from schools poured in to Shenzhen Library, calling it "a mutual journey dedicated to knowledge."

"With support from the Panyu-Jiaoling Paired Assistance Task Force, an educational talent apartment will be completed in July this year, providing better accommodation for future support teachers, solving worries and supporting sustainable education assistance," Chen Mingda said.

Good News from Jiaoling People's Primary School

Released at 10:56 on June 3, 2025 | From Shanxi Province

Warm congratulations to Zhong Mingrun (Class 602) and Yi Kailun (Class 607) of Jiaoling People's Primary School for their outstanding achievements in the 2025 Guangdong-Hong Kong-Macao Student Information Technology and Innovation Competition!

The 2025 Guangdong-Hong Kong-Macao Student Information Technology and Innovation Competition & Artificial Intelligence Literacy Exhibition, hosted by the Department of Education of Guangdong Province, was grandly held in Zhuhai from May 23 to 25. During the event, aerospace science education activities were also carried out at the Zhuhai Space Center. The competition gathered more than 4,000 young technology enthusiasts from over 1,000 schools across the Guangdong-Hong Kong-Macao Greater Bay Area, with exceptionally fierce competition.

Zhong Mingrun took part in the Creative Intelligent Manufacturing Level 1 event with her work Intelligent Traffic Light, competing against nearly 800 participants. With dedicated exploration and innovative thinking, she stood out through multiple rounds of challenges and

finally won the First Prize at the provincial level, ranking 13th in the province overall. She brought great honor to our school and fully demonstrated outstanding scientific and technological literacy!

Congratulations also to Yi Kailun (Class 607), who collaborated with Lin Huiyang from Guiling School. Their work Anti-Pressure Rolling Shutter Door won the Second Prize in the competition.

These remarkable achievements would not have been possible without the dedicated guidance of Teacher Chen Zeming, a supporting teacher, as well as Teacher Dai Zhihua from Jiaoling People's Primary School.

Teacher Chen Zeming, from Shiqi Central Primary School in Panyu District, Guangzhou, has introduced advanced information technology education concepts from Panyu to our school since joining the paired assistance program. Faced with students who were new to sensors and programming, Teacher Chen adopted a "theory + hands-on practice" approach. He taught algorithm logic, project debugging and optimization step by step, helping students grow from technology novices into independent innovative talents capable of completing complex projects.

During preparation for the competition, Teacher Chen stayed long hours in the computer classroom. He led the students through county and municipal selections, repeatedly polished defense details, and simulated high-pressure scenarios according to provincial standards. With hundreds of days and nights of commitment, he built a bridge for students to reach the provincial competition stage.

Furthermore, Teacher Chen not only coordinated resources to ensure training but also integrated educational devotion into our teaching team. His professionalism and teaching methods have set an excellent example for all teachers in our school, sowing the seeds for the sustainable development of information technology education.

We sincerely thank Teacher Chen Zeming and Teacher Dai Zhihua for their selfless dedication! With professionalism and care, you have lit up students' dreams of science and technology, injecting new vitality into information technology teaching at Jiaoling People's Primary School. All teachers will take you as role models, deepen innovation and science education, and nurture more ambitious young dreamers. May the light of science shine brightly in Jiaoling!

Once again, warm congratulations to Zhong Mingrun and Yi Kailun! Tribute to Teacher Chen Zeming and Teacher Dai Zhihua! We look forward to our school reaching new heights and continuing to achieve glory in information technology education!

Panyu District Education Bureau Support Team Boosts Education in Jiaoling:

All-Round Integrated Assistance Empowers Mountain Area Education Development

© Original, June 24, 2025

From May 23 to 25, the **2025 Guangdong-Hong Kong-Macao Student Information Technology and Innovation Competition & Artificial Intelligence Literacy Exhibition**, hosted by the Department of Education of Guangdong Province, was held in Zhuhai. More than 4,000 students from over 1,000 schools across the Greater Bay Area competed fiercely.

After intense competition, Zhong Mingrun from Jiaoling People's Primary School in Meizhou stood out and won the **First Prize at the provincial level**, ranking **13th in Guangdong**. This marks the **first time Jiaoling has won an award in such a high-level competition**. Behind this remarkable achievement lies the guidance and dedication of teaching-support teachers from Panyu District, Guangzhou.

Since launching paired assistance, the teaching-support team from the Education Bureau of Panyu District has upheld the philosophy of **"all-round integrated assistance"** and rooted itself in frontline education in Jiaoling. It has carried out targeted support in teaching practice, teacher development, school cooperation, and resource introduction, effectively promoting the development of education in Jiaoling County.

Statistics show that the team has:

- Delivered **35 demonstration lessons**
- Organized **20 teaching seminars**
- Held **15 professional teacher training sessions**
- Established **11 paired school partnerships** between Panyu and Jiaoling, building a long-term platform for educational exchange and cooperation.

At Guangfu School, Teacher Fu Yilin launched a donation drive and provided **300 sets of sports uniforms** to students.

Meticulous Nurturing: From Tech Novices to Innovation Talents

At the 2025 Guangdong-Hong Kong-Macao Student Information Technology and Innovation Competition, Zhong Mingrun entered the venue independently, completed her project autonomously, and presented confidently to the judges. With focus, exploration spirit and innovative thinking, she advanced through multiple rounds and won First Prize.

After receiving the award, Zhong Mingrun hugged her mother who had waited for a long time, and immediately messaged her instructor Chen Zeming to share the good news and express gratitude.

"Without Teacher Chen guiding me along this path, I could never have achieved this!" said Zhong Mingrun. For her, Chen Zeming was **a beacon on her journey of science and innovation**.

Chen Zeming, a teacher from Shiqi Central Primary School of Panyu District, was dispatched to support education in Jiaoling. As a part-time researcher in information technology in Panyu, he brought advanced teaching concepts to Jiaoling.

The development of STEM education in mountainous areas was not easy.

"When I first arrived, students had weak foundations, little competition experience, and limited equipment. But difficulties are like bugs in code — with patience, we can always find solutions," Chen said with a smile.

He used after-school and weekend time to set up a **science and innovation interest group**, teaching basic programming logic, sensor principles, hardware assembly and program debugging step by step. When equipment was insufficient, he arranged for devices to be **shared and transferred from Panyu** for students to practice.

In Chen Zeming's class, boring code became commands that controlled machines; complex circuits turned into lights illuminating dreams.

With his guidance, students from Jiaoling People's Primary School began to shine. Huang Junnan and Liu Yuqi were inspired by heavy rain disasters and proposed an **intelligent rescue device**. Chen Zeming accompanied them throughout design, production and refinement. Their project won the **Second Prize in the Meizhou Youth Science and Technology Innovation Competition**, giving students their first taste of achievement through innovation.

Later, when preparing for the provincial competition, Chen Zeming focused on the challenging **Maker & Intelligent Manufacturing** category. He identified Zhong Mingrun's talent and perseverance and designed a **tailored training plan** for her.

To overcome technical challenges, teacher and student often stayed in the computer room all day. Tiny solder joints and lines of code witnessed countless attempts, revisions and breakthroughs.

Hard work paid off.

Among strong provincial competitors, Zhong Mingrun performed steadily. After project presentation, mechanical design, technical testing and evaluation over one and a half days,

she won **First Prize (13th in Guangdong)**.

This was a **historic breakthrough**:

- The first provincial First Prize for Jiaoling People's Primary School in this event
- The best result in Meizhou this year

"Teacher Chen not only taught us knowledge, but also how to think like scientists, face failure and regain confidence," Zhong Mingrun said.

This embodied Chen Zeming's belief:

"Give a man a fish, and you feed him for a day; teach a man to fish, and you feed him for a lifetime."

He did not only coach students to win competitions — he planted a seed of **innovation** in their hearts, giving them courage to pursue dreams in science and technology.

Today, Chen Zeming continues his teaching support. Like a beam of light, he illuminates the path of innovation for children in mountainous areas and writes a vivid chapter for education assistance in eastern and western Guangdong.

Moistening Silently: Opening Hearts and Reigniting Passion for Learning

When Gu Jinbo from Pangxi Primary School in Panyu arrived at Guangfu School in Jiaoling, she was deeply touched by the students' pure eyes, full of longing for knowledge.

"They are simple, and their eyes are full of desire to learn. I truly enjoy being with them," she said.

Gu Jinbo paid special attention to quiet, underprivileged and low-performing students. She found that many struggled academically **due to lack of family care and parental support**. One student was cared for by his 70-year-old grandmother; his father worked night shifts, his mother worked far away, and he was often scolded and punished, leaving him withdrawn and unmotivated.

"The child's pain was hidden in his composition," Gu recalled. In an essay titled *A Letter*, he expressed fear and hopelessness. Those words deeply saddened Gu Jinbo, and she resolved to help him.

She used **one-on-one homework feedback** and after-school conversations to reach him. She affirmed his strengths, especially his interest in Chinese, then gently guided his learning methods.

One evening, she praised a brilliant sentence in his writing:

"This sentence is so vivid! It shows true feeling and talent!"

Her warmth melted the ice around his heart. Gradually, he began to open up, talking about his loneliness, tiredness and longing for family love. Gu Jinbo listened with understanding, without judgment.

Knowing she alone could not change his family situation, she called his parents patiently, sharing his small improvements:

"He cleaned the blackboard voluntarily yesterday. His handwriting is neater. Children have light inside — they need encouragement, not criticism."

She advised the parents to praise progress, adjust work schedules, and keep daily short calls. Her persistence and wisdom moved the family.

Slowly, the student began to raise his head in class, volunteer to answer questions, take part in duty, and improve his academic performance. Most importantly, **smiles returned to his face**.

Gu Jinbo's work reflects the deepest meaning of education:

Education is not only the transmission of knowledge, but the meeting of souls and the awakening of hearts.

It requires sensitivity to children's unspoken feelings, patience to build trust, and care to improve family environments. Her gentle persistence has lit up a young life and warmed a mountain community.
